

## **DIETICIAN API - HACKATHON**

### **TEAM 5 - POSTMASTERS**

**SESHA SRAVANI - TEAM LEAD** 

**GUNA THANGAVEL** 

LAVANYA SAIREDDY

**NIDHI SHARMA** 

**SUBASINI CLATTUS** 

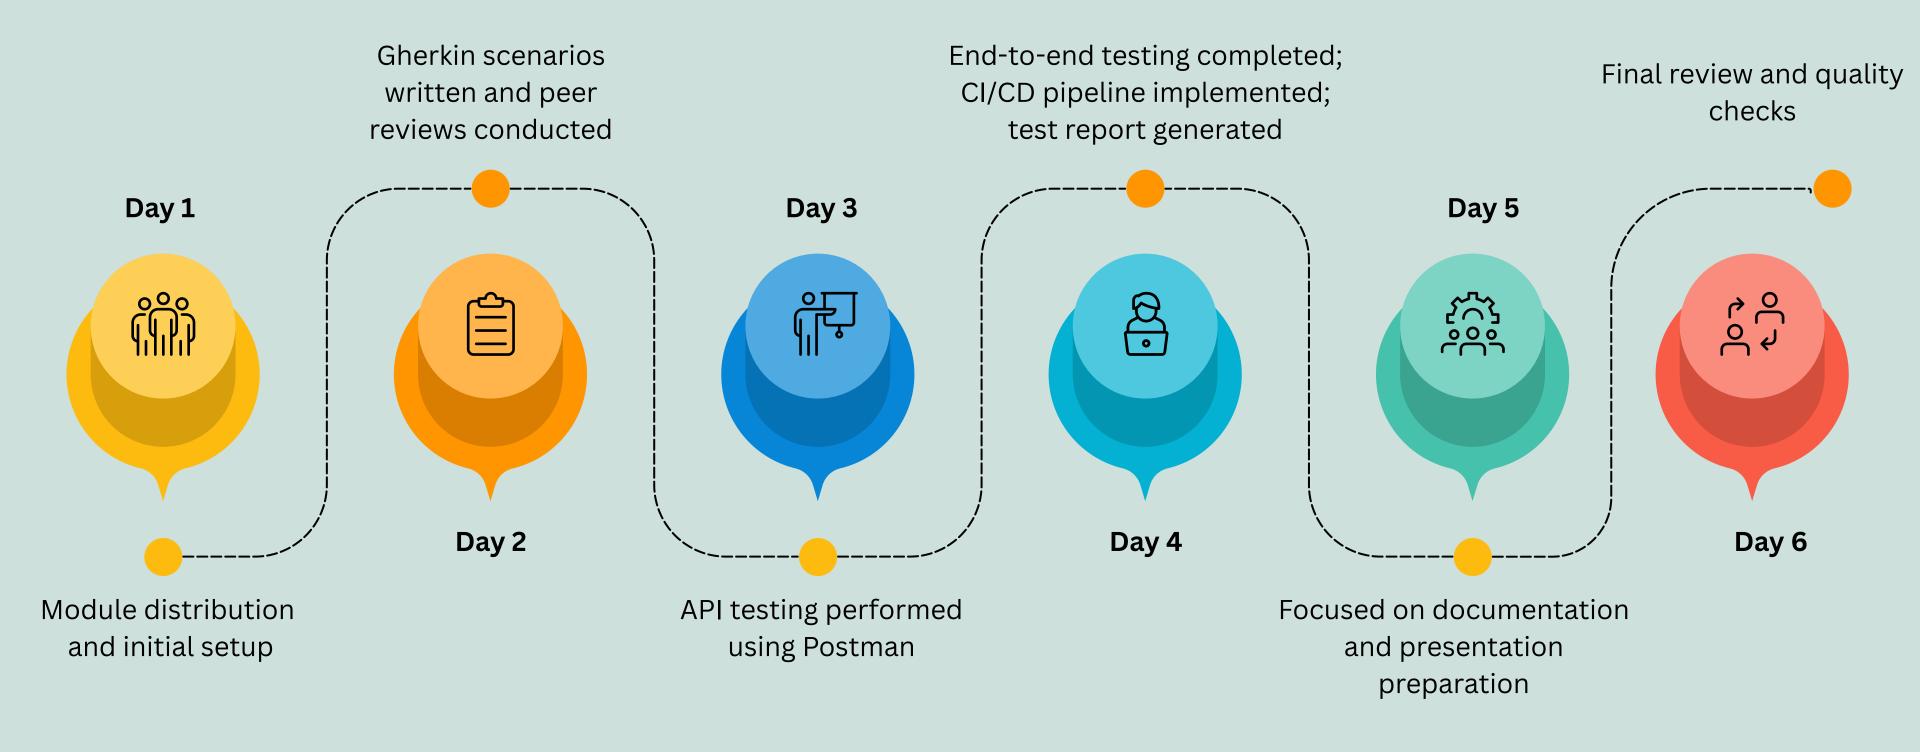

**SUBHADRA SAHU** 

**Duration:** 1 Week

### **Objective**

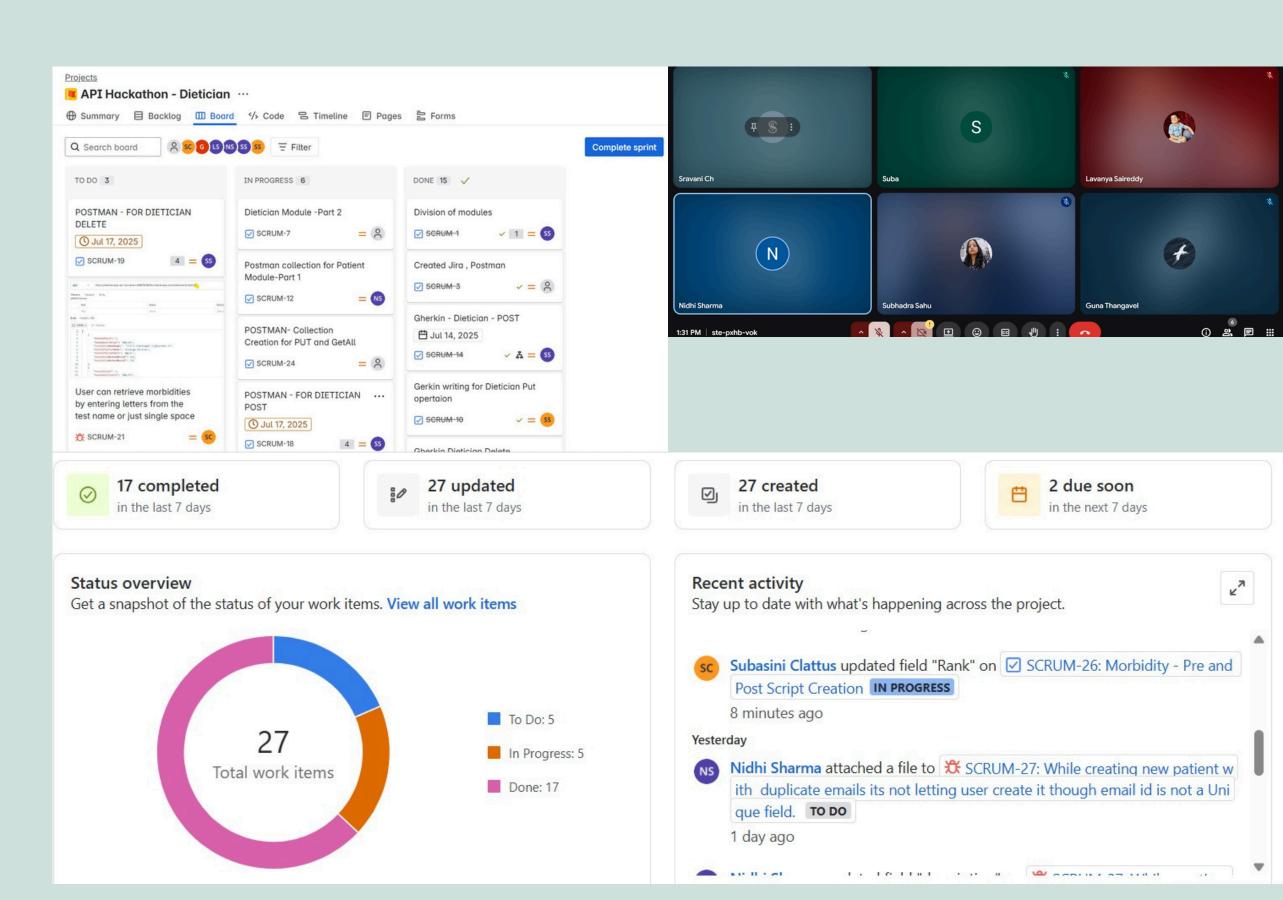

Build a robust API testing framework using Postman, integrating with CI/CD pipelines, Newman, and driven by Agile principles.

## **Team Workflow**

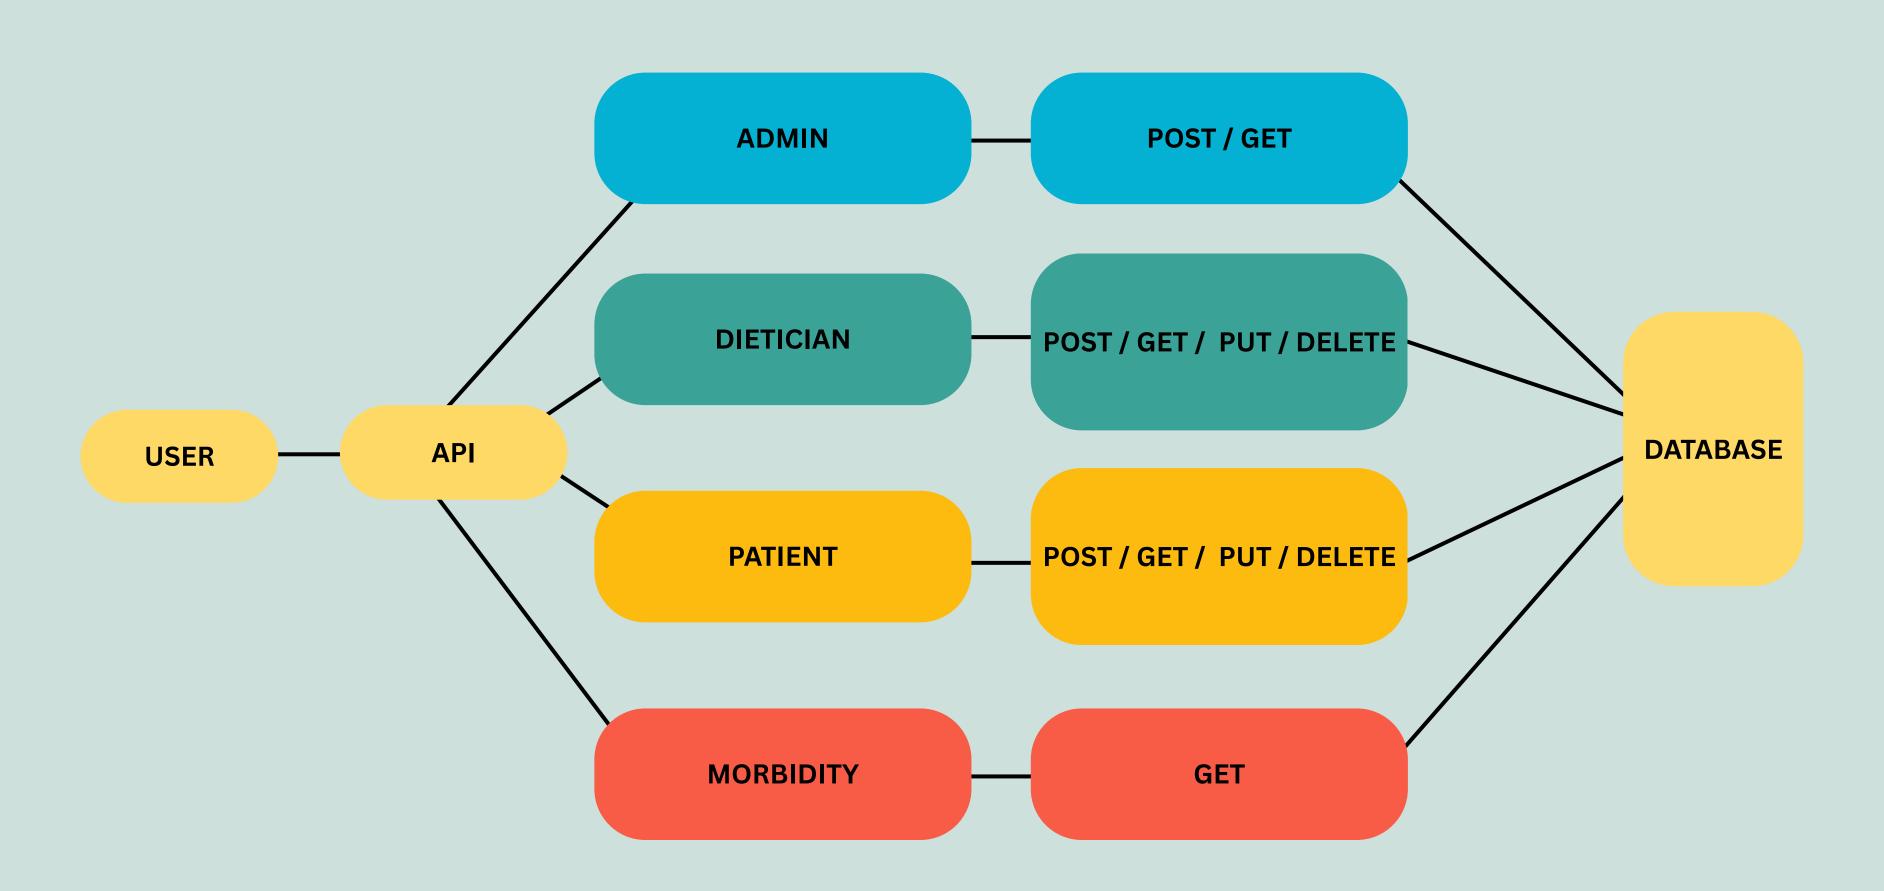

# Sprint Execution & Management

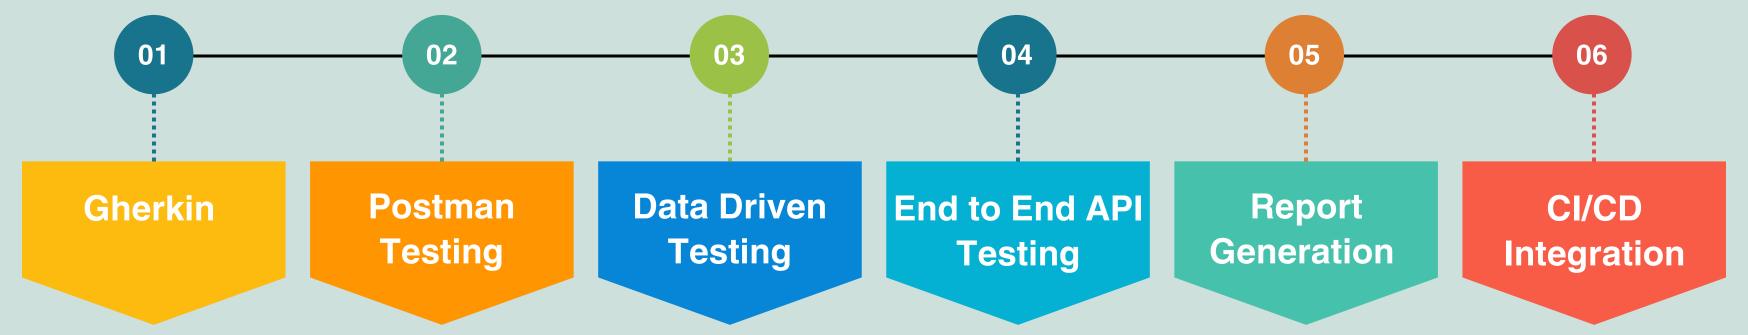

## DIETICIAN API ARCHITECTURE OVERVIEW

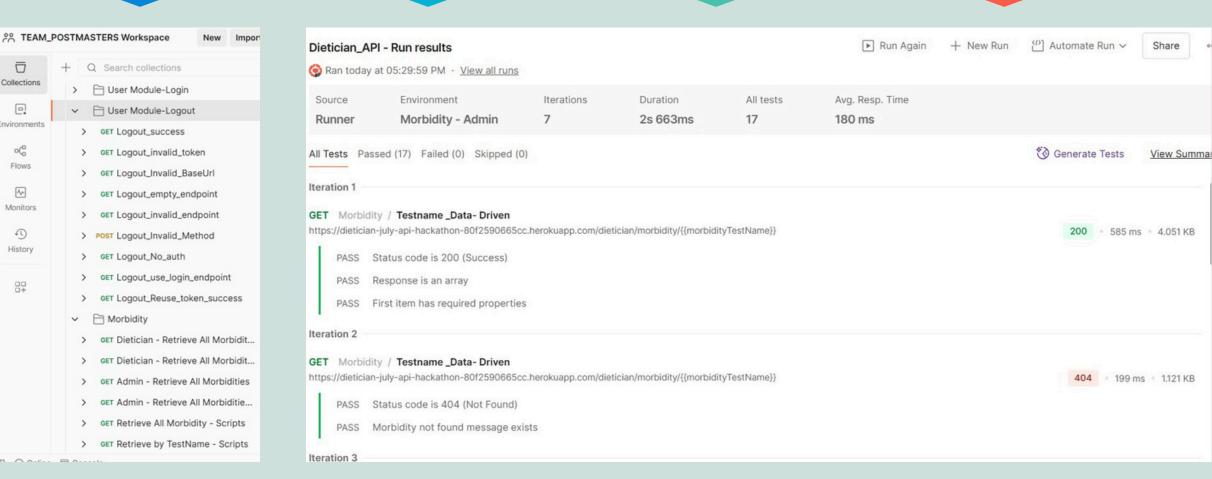

# **Project Implementation**

| Overview of No. of Scenarios Covered |               |                  |                 |
|--------------------------------------|---------------|------------------|-----------------|
| Modules                              | Scenario Type | No. of Scenarios | Total Scenarios |
| Dietician [PUT,GETALL/GETBYID]       | Positive      | 4                | 51              |
|                                      | Negative      | 47               |                 |
| Dietician [POST, DEL]                | Positive      | 8                | 33              |
| 575                                  | Negative      | 25               |                 |
| User Module                          | Positive      | 3                | 24              |
|                                      | Negative      | 21               |                 |
| Patient[POST,GET]                    | Positive      | 9                | 38              |
|                                      | Negative      | 29               |                 |
| Patient[PUT,DELETE]                  | Positive      | 4                | 44              |
|                                      | Negative      | 40               |                 |
| Morbidity                            | Positive      | 8                | 30              |
|                                      | Negative      | 22               |                 |
|                                      | Total         |                  | 220             |
|                                      |               |                  |                 |

# Challenges & Learnings

01

#### **Postman Workspace Limitation**

Limited collaboration due to a 3-member cap on free workspaces

05

#### **Environment & Variable Management**

Needed improved handling of global variables and base URLs.

02

#### **Authentication Issues**

Difficulty retrieving tokens in Swagger and Postman, delaying tests.

06

#### **Bug Identification**

Challenges differentiating between real errors and valid responses.

03

#### **Role-Based Validation**

Testing varied user roles (Admin, Dietician, Patient) with different access levels and responses.

07

#### **Report Integration**

Integrating test results with other tools to generate accessible, visual test reports.

04

#### **Data-Driven Testing Errors**

CSV/JSON formatting issues caused test failures; resolved by correcting data structure.

08

#### **Team Collaboration**

Coordinating across team roles to successfully chain and test complete workflows

### **THANK YOU**
